                                                                      Release

FOR IMMEDIATE RELEASE

Kisco Releases new iSeries Security Product

_____

Saranac Lake, NY, April 15, 1008: **Kisco Information Systems** (www.kisco.com) today announced Release 2 of its popular new iFileAudit security product for the IBM System i family of servers. iFileAudit is an audit tool for tracking changes to files in native System i databases at the field content level.

Release 2 of iFileAudit includes significant enhancements to the original package. Using Release 2, you can specify key structures for flat physical files that do not have a natural file key defined. This helps you find the records being updated. The new release also lets you select fields within your files to exclude from reporting thereby letting you concentrate on the critical fields that you want to track. You can also choose to ignore specific user profiles or, alternatively, focus on specific user profiles. There is also a new data export feature that allows you to extract the information from the iFileAudit database for purposes of creating your own reports using your favorite query tool on your System i.

iFileAudit works by using and interpreting file journals created and maintained by the Sytem i OS. If you are already journaling your file, iFileAudit will work with your established journals. If not, iFileAudit will create the necessary journal objects when you register your file with the product.

iFileAudit continues its core objectives letting you track the following kinds of file changes:

- Track changes to a specific field on a specific record to review how the current field contents were entered.
- Track both manual field changes and changes to fields done by program calculations.
- Identify the user profile that was used to make each file, record and field change.
- Identify the program that was used to make each file, record and field change.
- Identify the location from which each file change was made.
- Identify the job that made each file change.

iFileAudit includes online drilldown reporting tools and customizable printed audit reports. Reports can run on a global or selected basis for each file being tracked.

This versatile package can have numerous applications within your organization. Use it to find the guilty party when unexpected or erroneous data shows up in your applications. Or use it as an audit trail tool for HIPAA, SOX or other internal change management controls. iFileAudit can also be used by application developers or system administrators to understand how a server process affects a field value during its execution.

Complete product specs and other information, including screen shots and support information, are available at www.kisco.com/ifa.

iFileAudit, is priced at $995.00 for any System I (i5, iSeries or AS/400) computer. For companies with several systems, Kisco offers multiple-license discounts. LPAR price is $1,595.00. Kisco Information Systems offers a free 30-day evaluation of the product that can be downloaded with complete software documentation in PDF format from www.kisco.com. To obtain a free evaluation on CD call Kisco at (518) 897-5002 or e-mail sales@kisco.com.
