Kisco Information Systems

FOR IMMEDIATE RELEASE

Kisco Announces Release 2 For
End-User Password Reset Utility for IBM i

Saranac Lake, NY, August 5, 2014: **Kisco Information Systems** today announces a release upgrade for its browser based, end-user password reset tool for the IBM i platform of computers. The most frequent call to any organization's Help Desk is for a password reset. **iResetMe** lets the password reset function be moved back to the end-user relieving the Help Desk of this chore in most cases.

Using iResetMe, an organization can designate which user profiles can perform their own password resets from a browser session. Once a user profile has been enrolled, the end user then activates it by supplying answers to up to 5 personal questions. Once activated, if a user's password expires or becomes disabled for any reason, the end user simply starts a secure browser session and walks through a reset function that culminates in a new password being assigned and activated.

The browser interface is implemented using the existing Apache web server that is included in IBM's i/OS. Installation of iResetMe includes step-by-step instructions on how to create the required Apache server instance and then to configure it for secure HTTPS communications. Once set up and configured, all browser sessions are safely encrypted for maximum security.

Release 2 for iResetMe adds several important new features to the product as follows:

- Automatic email notification option to advise users by email when their profile has been disabled and give them a link to the iResetMe reset process.
- Optional encryption of the challenge response questions stored on the IBM i system.
- On password resets, an option now shows the current password rules in the browser session to help the user when setting a new password.
- Support is now included for system using long passwords with password levels 2 and 3
- Additional documentation tailored for end-users is now available.

iResetMe is priced based on the number of user profiles to be supported. User price tiers start at 25 users with 50 user, 100 user and unlimited user licenses available. The software is compatible with systems using IBM's V5R4 software release and higher, including i/OS 7.1.

Complete product information, including screen shots and support information, is available at www.kisco.com/irm.

iResetMe pricing starts at $495.00 for a single partition 25 user license and topping out at $1,295.00 for a single partition unlimited user license. For companies with several systems, Kisco offers multiple-license discounts. LPAR pricing is also available to let customers implement the software in multiple partitions on a single serial number. Kisco Information Systems offers a free 30-day evaluation of the product that can be downloaded with complete software documentation from www.kisco.com. To obtain a free evaluation on CD call Kisco at (518) 897-5002 or e-mail sales@kisco.com.
