Kisco Information Systems   News Release

FOR IMMEDIATE RELEASE

Kisco Announces Release 4 For
End-User Password Reset Utility for IBM i

Saranac Lake, NY, January 17, 2020: **Kisco Information Systems** today announces a release update for its **iResetMe** browser based, end-user password reset tool for the IBM i platform of computers. The most frequent call to any organization's Help Desk is for a password reset. **iResetMe** lets the password reset function be moved back to the end-user relieving the Help Desk of this chore in most cases.

Using **iResetMe**, an organization can designate which user profiles can perform their own password resets from a browser session. Once a user profile has been enrolled, the end user then activates it by supplying answers to up to 5 personal questions. Then, if a user's password expires or becomes disabled for any reason, the user simply starts a secure browser session and walks through a reset function that culminates in a profile reset or a new password being assigned and activated.

The browser interface is implemented using the existing Apache web server that is included in IBM's i/OS. Installation of **iResetMe** includes step-by-step instructions on how to create the required Apache server instance and then to configure it for secure HTTPS communications. Once set up and configured, all browser sessions are safely encrypted for maximum security.

Release 4 for **iResetMe** adds several important new features to the product as follows:

- Optional password synchronization across multiple systems is now available. When a user password is changed in one partition, it can then be replicated across other partitions or remote systems.
- Optional user exit program can be set for additional actions when user profiles are registered to iResetMe.
- Optional user exit program can be set for additional actions when a user password has been changed using iResetMe.
- For systems using the IBM i Profile Activation Schedule, iResetMe now honors the defined time frames.
- Email notifications are now formatted using HTML for a more contemporary look.
- A minimum challenge question response length is now enforced.
- Optional custom contact information is now shown to end users when errors occur during browser reset session.
- Security for iResetMe has been enhanced in several areas.

iResetMe is priced based on the number of user profiles to be supported. User price tiers start at 25 users with 50 user, 100 user and unlimited user licenses available. The software is compatible with systems using IBM's 6.1 software release and higher, including i/OS 7.4.

Complete product information, including screen shots and support information, is available at www.kisco.com/irm.

iResetMe pricing starts at $520.00 for a single partition 25 user license and topping out at $1,360.00 for a single partition unlimited user license. For companies with several systems, Kisco offers multiple-license discounts. LPAR pricing is also available to let customers implement the software in multiple partitions on a single serial number. Kisco Information Systems offers a free 30-day evaluation of the product that can be downloaded with complete software documentation from www.kisco.com. To obtain an evaluation on CD call Kisco at (518) 897-5002 or e-mail sales@kisco.com.
