FOR IMMEDIATE RELEASE

## **Kisco Releases Version 9.0 of Popular Report Distribution Package**

---

Saranac Lake, NY, October 4, 2006: **Kisco Information Systems** (www.kisco.com) today announced the immediate availability of version 9 of their WebReport/400 package.

WebReport/400 is an ebusiness utility that will automatically convert iSeries and AS/400 reports to PDF or formatted text and distribute them in email or as internet/intranet content. Output options include HTML, RTF, CSV and PDF. The application offers flexible configuration and ease of use, as well as the ability to embed report distribution functionality into your existing applications.

The new release includes the following critical upgrades:

- Send multiple reports as multiple attachments on a single email message
- New flexible email subject text options
- Support added for email groups
- New flexibility in naming files to be stored in Integrated File System (IFS)
- Support for 128 bit file encryption for Adobe Acrobat files

## **Multiple Reports**

In previous versions of WebReport/400, users had to send multiple emails to the same recipients if they needed to distribute more than one report. Version 9 now allows users to attach more than one file to single email, which can then be distributed to an individual or group.

## **Flexible Email Subject**

WebReport/400 V9 addresses a critical need for flexibility in creating subject lines for emails. A new “subject conversion table” lets you use spool file fields to default to predetermined subject phrases. The product can use the spool file name, user data field contents or form type as the basis for determining the subject line text.

## **Email Groups**

Support has been added for email groups. Using the existing Address Book function, customers can define groups and then just send to a single group name without having to include every email address separately.

## **File Naming**

The new version increases file naming flexibility to support file storage in the Integrated File System (IFS). This new feature will allow file names in the IFS to be easily differentiated by letting WebReport/400 generate a portion of the file name based on a variety of choices. Files can be assigned a generated number, based on the current date, based on the user profile or based on the date and time. Prior to this, a fixed IFS name was the only option.

For complete, detailed information in WebReport/400 and all its features, along with case studies, screen shots and technical support announcements, please visit [www.kisco.com/webreport](http://www.kisco.com/webreport).

WebReport/400 PDF, is priced at \$1,795.00 for the System i family of servers. For companies with several systems, Kisco offers multiple-license discounts.
